Canada-China Project overview

“Prevention, Care and Support for Vulnerable Populations at Risk of HIV/STI in Shanghai, China”

- A collaboration between the Dalla Lana School of Public Health and the Shanghai Centres for Disease Control and Prevention
 - Five research projects:
 - Construction workers
 - Female entertainment workers
 - Men who have sex with men
 - People living with HIV and AIDS
 - Policy review and analysis
 - Training and capacity building

Background – History of Research Methods

- Focus on individual characteristics and behaviours
- Shift towards contextual and social-structural influences

Terms of self-identification

- Tongzhi (同志)
 - Same will/ Same purpose
 - Comrades
 - Gay, bisexual and other MSM

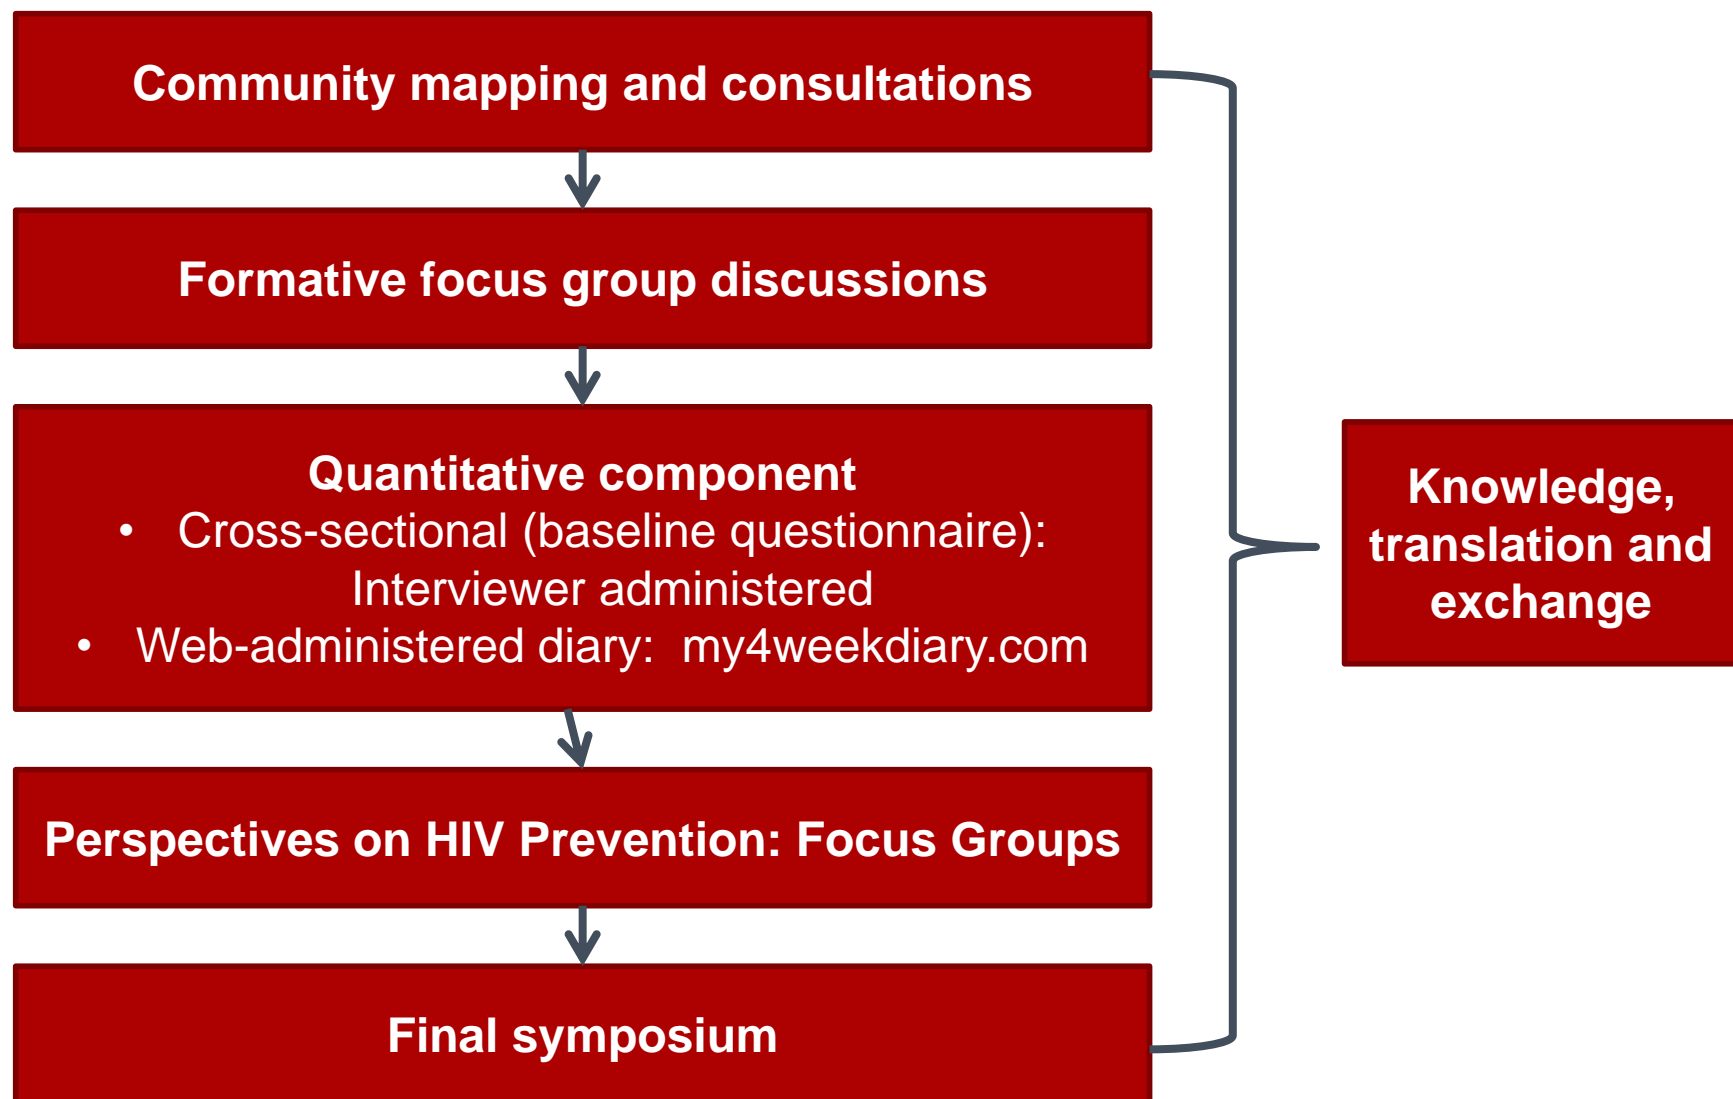

Objective of analysis

- To demonstrate the utility of a longitudinal, event-based web-diary to survey Tongzhi in Shanghai, China

The screenshot shows a web interface for a survey. At the top left is the logo for the Shanghai Municipal Center for Disease Control & Prevention (SCDC) with the text '上海市疾病预防控制中心' and 'SHANGHAI MUNICIPAL CENTER FOR DISEASE CONTROL & PREVENTION'. At the top right is the logo for the University of Toronto Dalla Lana School of Public Health. In the top right corner, there is a language selection option: '惯用语言: English 中文'. The main title of the survey is '男性健康及生活方式日记调查' (Male Health and Lifestyle Diary Survey). Below the title are two input fields: '用户名' (Username) and '用户密码' (User Password). A link for '忘记了您的用户密码?' (Forgot your user password?) is located below the password field. A '登录' (Login) button is positioned at the bottom center of the form area.

Study overview

Methods – Eligibility

- **Cross-sectional survey:**
 - ≥ 16 years of age
 - ≥ 1 male sex partner(s) in the previous 6 months
- **Longitudinal event-based diary survey:**
 - ≥ 2 male sex partners in the previous 6 months
 - ≥ 1 sexual encounter/week in the previous 6 months
 - ≥ 1 sexual encounter in week prior to recruitment
 - Ability to complete a self-administered questionnaire

Methods – Sampling

Cross-sectional sampling

Stage one: Select districts

Stage two: Select individuals

- Decentralised
- Iterative
- Population is not homogenous → multiple approaches used

Event-based diary

- Recruitment from among those who completed the cross-sectional (baseline) questionnaire

Methods – Sampling, continued

- 2 朝阳农场
- 3 东海农场

- C XuHui
- D ChangNing
- F Jing'an
- L JiaDing
- N SongJiang
- S PuDong
- T ChongMing

Methods – Analysis

- Characteristics of participants completing the web-administered diary compared to those completing only the cross-sectional questionnaire
 - Continuous variables: T-tests
 - Categorical variables: Chi-square tests, Fischer's exact test
 - Ordinal variables: Wilcoxon Rank Sum

RESULTS

Results – Socio-demographics

Socio-demographics		Diary participants		Participants completing only the cross-sectional		P-value
		N	%	N	%	
Education	No formal education	0	0.0	0	0.0	Wilcoxon rank sum p = 0.01
	Less than high school	2	1.1	6	0.8	
	Some high school or vocational school	42	23.7	249	31.2	
	Some university or college	107	60.5	477	59.8	
	Some graduate school	26	14.7	66	8.3	
Cohabiting with a man	Yes	47	26.6	140	17.5	Chi-square p=0.006
	No	130	73.4	658	82.5	
Likelihood of getting married	Very unlikely/ unlikely	72	44.2	247	37.0	Chi-square p=0.03
	Undecided	61	37.4	261	37.4	
	Likely/ very likely	30	18.4	191	25.6	

Results – Sexual identity

Sexual identity		Diary participants		Participants completing only the cross-sectional		P-value
		N	%	N	%	
Sexual identity	Gay/ homosexual	149	84.2	580	72.7	Chi-square p=0.01
	Straight/ heterosexual	1	0.6	4	0.5	
	Bisexual	27	15.3	211	26.4	
	Other, specify	0	0.0	0	0.0	
	Don't know	0	0.0	3	0.4	
Kinsey scale (Sexual behaviour in the past 5 years)	Only sex with men	132	75.0	525	66.1	Chi-square p=0.01
	Mostly sex with men, occasionally with women	32	18.2	169	21.3	
	Sex about equally with women and men	10	5.7	42	5.3	Wilcoxon rank sums test p=0.1
	Mostly sex with women, occasionally with men	2	1.1	58	7.3	
	Only sex with women	0	0.0	0	0.0	
		0	0.0	0	0.0	
	No sex with others	0	0.0	0	0.0	

Results – Modes of looking for sex

Top five modes of looking for sex	Diary		Participants completing only the cross-sectional		P-value
	N	%	N	%	
Internet	95	73.1	389	69.4	0.4
Tongzhi bars	32	24.6	92	16.4	0.03
Private home, party	20	15.4	97	17.3	0.6
Bathhouse, saunas	16	12.3	86	15.3	0.4
School, university	12	9.2	44	7.9	0.6

Results – Sexual behaviours

Sexual behaviours in the previous six months		Diary		Participants completing only the cross-sectional		P-value
		N	%	N	%	
Sex with a female partner		13	7.3	111	13.9	0.02
	<i>Unprotected vaginal or anal intercourse with a female*</i>	7	53.8	58	52.2	0.9
Primary male partner		110	62.1	465	58.2	0.3
	<i>Unprotected anal sex (receptive or insertive) with a primary partner*</i>	50	45.4	169	36.3	0.08
Regular male partner		107	60.4	393	49.2	0.007
	<i>Unprotected anal sex (receptive or insertive) with a regular male partner*</i>	38	35.5	97	24.7	0.03
Casual male partner		109	61.5	365	45.7	0.0001
	<i>Unprotected anal sex (receptive or insertive) with a casual male partner*</i>	28	25.6	83	22.7	0.5

*Among participants with that partner type (i.e. denominator consists of participants with that partner type)

Results – Diary data quality

- Participants provided data for all but one diary day
 - Missed by one participant
- The proportion of missing responses < 1.0%

Results – Diary

- 1031 sexual events

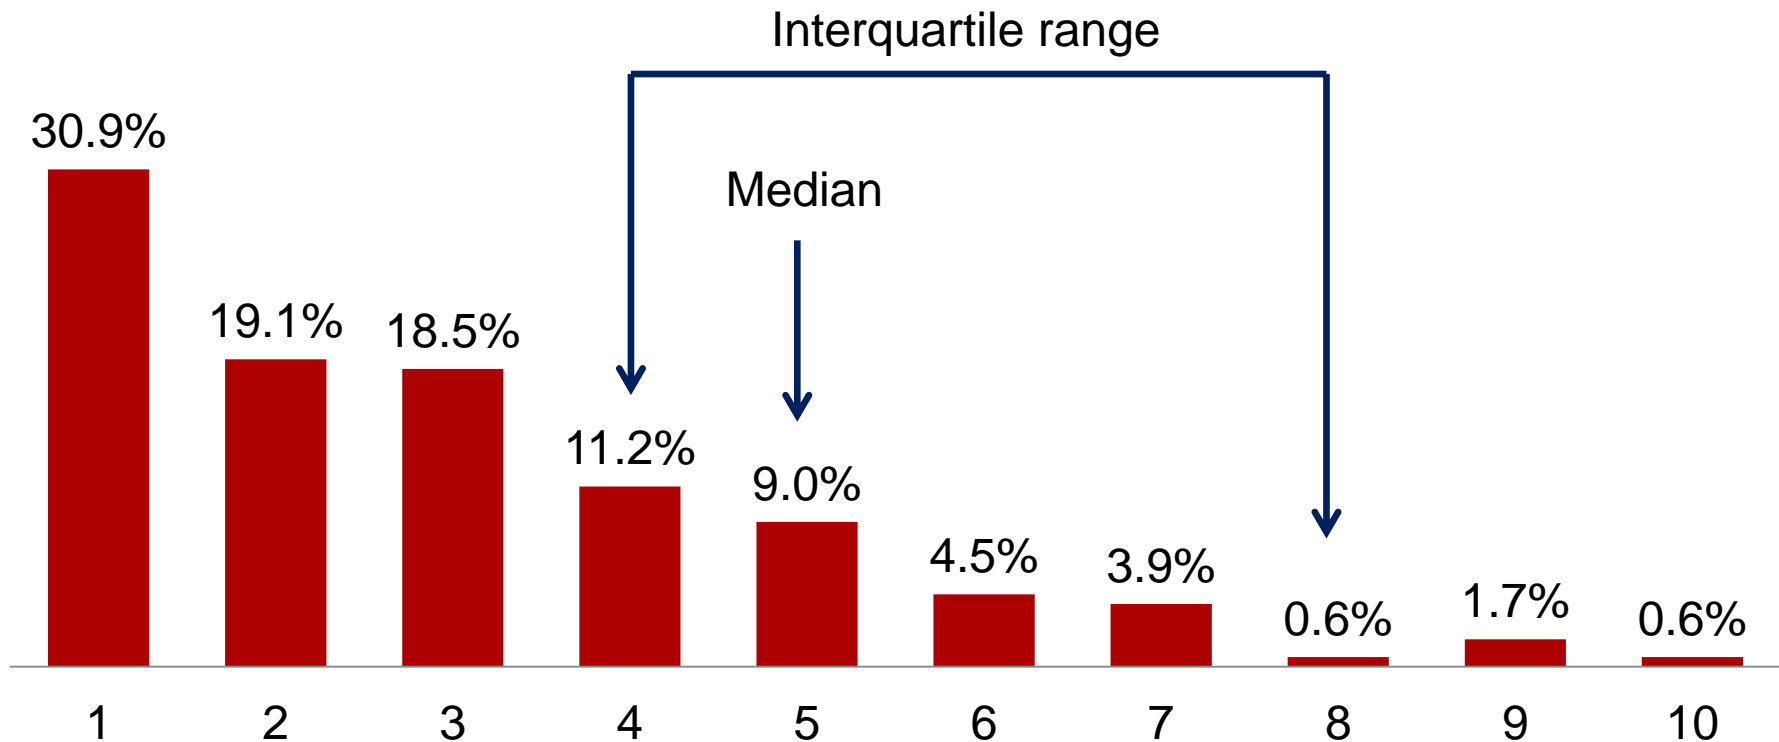

Figure 1: Distribution of number of unique partners among diary participants

Conclusions and implications

- A high proportion of men use the internet to look for sex
 - Accustomed and comfortable
 - Interaction and anonymity
- Little missing data and low attrition
 - Diary was acceptable and feasible
- Method has promise in other populations
 - Address gaps in knowledge and advance understanding of contextual variables associated with risk

Innovations

- Web-diary
- Event-level rather than global measures
- Recruitment techniques
- Participatory research practices
 - Community-level
 - Public health practitioner-level
