University Health Network

Dr. Darrell Tan,

MD, FRCPC
Staff Physician, Research
Fellow

Dr. Rupert Kaul,

MD, PhD, FRCPC
Staff Physician, Clinician
Scientist

What: Café Scientifique
When: Tues, April 27, 2010, 6 pm
Where: lo'la Martinis, 7 Maitland St
RSVP: rali@ohtn.on.ca

Most people don't realize that about one in five Canadian adults is infected with genital herpes. Research suggests that herpes may be fuelling the spread of HIV, and worsening HIV disease among infected individuals.

Do you know how you can tell if you have herpes, or how herpes can be treated and prevented? Interested in learning more about the effects of herpes on the HIV epidemic? Ever wondered how to talk to sexual partners about sensitive issues like herpes status and HIV status?

Interested in hearing what infectious disease experts and other interested parties have to say?

Join us to share your thoughts and find out more about how herpes and HIV may affect you and your community.

This is a free event. Space is limited.
