Fact Sheet

Toward a Housing and HIV Strategy for South West Ontario*

HIV is a serious health problem in Ontario. HIV continues to be a life threatening illness with no cure. An estimated 24,891 Ontarians are currently infected with HIV, 8,799 have died and over 1,000 new cases are diagnosed each year. Historically, the populations most at risk of HIV across the province have been:
- men who have sex with men
- people who share contaminated equipment to inject drugs
- people from countries in Africa and the Caribbean where HIV is widespread
- Aboriginal people.

HIV at a Glance in South West Ontario

Between 2003 and 2006, about 638 people were newly diagnosed with HIV in South West Ontario.

Over one-third of the people recently diagnosed are gay men, about one quarter are people from countries where HIV is widespread, and about 10% use injection drugs. Many have complex health and social needs – including the need for affordable, appropriate housing.

The Income and Housing Gap

When data gathered through Positive Spaces, Healthy Places – a longitudinal study of 600 people with HIV across Ontario – is compared with census data, the income and housing gap between people living with HIV and the general population in South West Ontario is clear.

* South West Ontario includes 4 LHINs (Hamilton Niagara Haldimand Brant, Waterloo Wellington, South West, and Erie St. Clair)
The Education, Employment and Age Gap

- Only 1 in 10 people with HIV has a post secondary degree, compared to almost half the general population.
- Three of four people with HIV are unemployed – usually due to their illness – compared to about 1 out of every 20 people in the general population.
- People with HIV in South West Ontario are slightly younger than the general population. About half are under age 44. Because of their age, they often do not have savings, housing stability or other resources to manage a long illness.

The Bigger Picture

People living with HIV in South West Ontario are trying to manage a life-threatening illness with lower incomes and less education, and without the employment opportunities their neighbors enjoy.

Six of 10 people with HIV are generally satisfied with the health and social services they receive, but 4 of every 10 report needing more psychological services and support, and 1 of 3 believe they would benefit from more primary care and psychiatric services.

The Research Team

Principal Investigators
Ruthann Tucker, Expert Advisor, CBR Initiatives, OHTN
Saara Greene, Fife House
Dale Guenter, McMaster University, CLEAR

Co-Investigators
Jay Koornstra, Bruce House
Michael Sobota, AIDS Thunder Bay
LeVerne Monette, Aboriginal AIDS Strategy
Steve Byers, AIDS Niagara
Leo Narciso, Ontario AIDS Network
James Dunn, CRICH, University of Toronto
Stephen Rwang, CRICH, University of Toronto
Sean B. Rourke, OHTN, CRICH, University of Toronto

Peer Research Assistants
D. Hintzen, Central/GTA Region
M. Hamilton, South West Region
M. Kayitesi, South West Region
J. Truax, Central/GTA Region
J. Watson, Central/GTA Region

Notes to Table

1 Includes Social Assistance, Disability Pension, Pension, Employment Insurance and Worker’s compensation.
2 For the general population, data provided indicates social assistance as % of total income whereas the data for PHAs indicates percent of PHAs whose main source of income is Government transfer.
3 Percent of people below the Low Income Cut-off (LICO) is used as a proxy for difficulty in buying food and shelter for the general population. LICO is the minimum amount (defined by Statistics Canada) of income that a family or household needs to cover basic necessities (food, clothing, and shelter).
